

**Application:** SOURCE for Eco-Tourism

**Site Name:** Abrolhos Islands

**Location:** Abrolhos Islands, Western Australia

**Installation Method:** Ground Mounted

**Array Size:** 4 Hydropanels

## Project Overview

The Abrolhos Islands, located off the coast of Geraldton, Western Australia, is a tropical remote destination, visited by those who wish to dive for pearls or explore the local marine life. The installation of two SOURCE Hydropanels at the site now provide the visitors and residents of Abrolhos Island with their own off-grid supply of clean drinking water. A sustainable and renewable solution for water, this SOURCE Hydropanel array will offset up to 80,000 plastic bottles over its lifetime.

This project received funding as part of ARENA's Advancing Renewables Program.
